

[Outline] HR - Company Policies Agent Maintenance Guide

Sources

- [QuickGuideSkill] — Amazon Quick platform documentation on Spaces, Chat Agents, sharing, and testing
- HR - Company Policies Space — agent-linked space with 4 documents (public_holidays.csv, employee_handbook.pdf, performance_review_guidelines.pdf, leave_policy.pdf)

Core Thesis

This guide provides step-by-step instructions for maintaining the "HR - Company Policies" custom chat agent in Amazon Quick, covering document management, official documentation references, access sharing best practices, and the testing/publishing workflow.

[Outline] Section 1: Introduction

Brief overview of the HR - Company Policies agent, its purpose (providing accurate HR policy information), and the linked Space containing 4 documents.

[Outline] Section 2: Adding Documents to the HR - Company Policies Space

Step-by-step instructions for uploading new documents to the Space:

- Navigate to Spaces via the navigation side panel
- Open the "HR - Company Policies" space
- Go to the Files tab and click Upload
- Supported file types: Word, Excel, PowerPoint, PDF, CSV, TXT, RTF, JSON, YAML, XML, Outlook message, HTML
- Limit: up to 100 files per Space; images are not supported
- Best practices for document naming and organization

[Outline] Section 3: Amazon Quick Official Documentation

- Link to the official Amazon Quick documentation: <https://docs.aws.amazon.com/quicksuite/>
- Guidance on when to consult official docs (advanced configuration, troubleshooting, API/SDK references)

[Outline] Section 4: Sharing Access to the Agent

How to share the agent with users and groups:

- Navigate to Chat agents via the navigation side panel
- Open the HR - Company Policies agent and use the Share menu
- Guidance on Owner vs Viewer privileges:
 - **Owner privileges:** HR team members, policy administrators, and agent maintainers who need to edit agent configuration, update persona instructions, manage reference documents, and modify linked Spaces
 - **Viewer privileges:** General employees and managers who only need to interact with (chat with) the agent to get policy answers
- Security note: Spaces respect Amazon Quick's permission system — agents only return information the user has access to

[Outline] Section 5: Testing Updates and Publishing Changes

How to test agent updates before making them available to end-users:

- After making changes (new documents, updated persona instructions, modified Space content), test by chatting with the agent directly
- Verify the agent can answer questions based on newly added documents
- Check that persona instructions produce the desired tone and behavior
- Confirm reference documents are within the 100K character limit
- Troubleshooting tips: if the agent isn't finding answers, verify data is added to the linked Space; if responses are inaccurate, review persona instructions and reference documents
- Once satisfied, changes to the Space (e.g., new file uploads) are automatically available to all users with access
- Changes to agent configuration (persona, reference docs) take effect once saved — no separate "publish" step is needed

[Outline] Section 6: Best Practices Summary

- Keep documents up to date and remove outdated policies
- Use clear, descriptive file names
- Regularly test the agent after updates
- Review access permissions periodically
- Use reference documents for critical guidelines that must be preserved exactly
